

Creating Accessible Digital Materials

Universities have an obligation to provide learning materials that are accessible to all students, including those who may have disabilities or who use assistive technologies to access digital content.

The [UNLV Office of Accessibility Resources](#) can provide training, oversight, and support in the creation, adoption, and procurement of materials that are compliant with [UNLV Digital Accessibility Policy](#).

DID YOU KNOW? Providing learning content in a digital manner can benefit and increase engagement among all students, including international students and students with disabilities, *as long as that content is provided in an accessible manner.*

If you have questions or need any assistance with creating or adopting accessible content, please contact the Office of Accessibility Resources at accessibilityresourceteam-request@unlv.edu.
